DESIGNING & DEVELOPING EDUCATIONAL COURSEWARE

VLE

& PLE

- ◆ A VLE (Virtual Learning Environment) is a computer program that facilitates computerized learning or e-learning. Such e-learning systems are also called **Learning Management System (LMS)**.
- ◆ **Examples:** Moodle, Blackboard, Second Life, etc.

- ◆ Personal Learning Environments (PLE) are systems that **help learners take control of and manage their own learning**. It is an environment rather than a system.
- ◆ **Examples:** Web 2.0 tools such as blogs, wikis, Twitter, Facebook, etc.

VLE V_s PLE

- ◆ VLEs are considered as institution-led, “**one size fits all**” monoliths.
- ◆ PLEs, on the other hand, are seen as **learner-centred, flexible** environments.
- ◆ VLEs can also include PLEs, like blogs and wikis.
- ◆ E-portfolios are the result of working within a PLEs.

EDUC70221 Evaluation and Design of Educational Courseware 2011-12 1st Semester Orientation

School of Education
Language Teacher Education Group

Orientation

Distance and On-site participants
This site is accessed by two different groups and because of past experience and feedback we have created two different sets of Forums.
The content of the Courseware is primarily aimed at the participants who are at a distance, so when it asks you to make a comment on the forum, then the forum is designed for distance participants. If on-site participants want to engage in these conversations, then this is fine, but there are also different forum activities for you and you will be advised what these are in classes. On-site participants can of course make use of the online input materials to review the regular class.
The next section on the organisation of the course unit applies to both groups.

Course overview and timetable
This course unit aims to provide you with the skills to both evaluate existing educational courseware and also to create and critique your own. The first part of the course unit gets you to look at a variety of learning materials and review them using a combination of frameworks. The second part involves you prototyping a learning task using authoring software. In the third part we will create learning materials making use of WordPress as a Content Management System and combining it with a number of tools.
The course unit uses a wiki and a blog as its core technologies for the delivery of the material, the role of Blackboard will be to provide a space for management of the materials and discussions. We will be making use of Wimba classroom for tutorial sessions later in the course unit.
The basic schedule is as follows:
Week 1 (26 Sep – 2 Oct): Setting the scene and materials evaluation

 Page history

Dear all,

This is the wiki page I have set up to collect all the materials developed during the course. There are three folders created for three modules along with the sub-folders for each subtitle. Besides, you will see some extra pages which will help you develop your IT skills. During our course, there will be some tasks you need to do, you can find the tasks on the sidebar (on the left side of the page).

Theory: Instructional Design Theory

Method: Blended Learning

Approach: Learner- Centered Approach

Objectives:

- To enhance digital literacy and basic ICT (*Information Communications Technology*) skills
- To provide knowledge of appropriate web technologies and skills for incorporating web 2.0 tools into the classroom.
- To provide techniques for integrating technology into the curriculum, and strategies to overcome possible problems during the integration process.
- To practise designing, developing and evaluating educational courseware.
- To use educational web-based resources effectively.
- To use interactive multimedia learning materials in the light of cognitive load theory.
- To develop multimedia learning materials in line with multimedia design principles.
- To develop skills for integrating all the materials developed during the course into the actual courseware.

MODULE 1: TECH-UP (4 Hours)

Improving ICT Skills: Google shortcuts, Google's tools, getting royalty free images, best websites for teaching resources and lesson plans, screencasting tools.

Internet Safety: Internet safety tips, teaching internet safety through digital games.

Web Technologies: Basic tutorials for web technologies.

Learning Theory & Instructional Design Theory

- ◆ *Learning theory* is the study of **how people learn**.
- ◆ *Instructional Design Theory* is the study of **how to best design instruction so that learning will take place**.

(Smith, n.d.)

Setting clear objectives and design accordingly, plays an important role in designing good instruction. (Wilson, Parrish, and Veletsianos, 2008)

EFFECT

④ DEFINE

④ DESIGN

④ DEVELOP

④ EVALUATE

4 Usability *Heuristics

refers to experience-based techniques for problem solving, learning, and discovery. (Wikipedia)

- ◆ Visibility of system status
- ◆ Recognition rather than recall
- ◆ Aesthetic and minimalist design
- ◆ Help and documentation

(Nielsen, 1994)

E-Books: Issuu.com

WORD- POWERPOINT- PDF

The screenshot displays the Issuu.com web interface. At the top left is the Issuu logo. To its right is a search bar with the placeholder text "Search Issuu". Below the search bar is a horizontal toolbar containing icons and labels for "Share", "Edit", "Delete", "Advertise", "Statistics", "Embed" (highlighted with a red box), and "Copy link". A red arrow points from the search bar area down to the "Embed" button. Below the toolbar is a blue header bar with a briefcase icon and the text "My Documents / All Documents". Underneath this is a grey banner with the text "The tag cloud is not updated instantaneously" and the words "pbworks" and "wikis". Below the banner is a table with columns "Title", "Description", and "Date". The first row of the table shows a document titled "PROBLEMS AND SOLUTIONS" by "isilboy". A red arrow points from the "Title" column down to the document's thumbnail. The thumbnail is a white page with the title "PROBLEMS & SOLUTIONS" and an image of several small red and yellow items. To the right of the thumbnail is a preview of the document's content, which includes a list of items and a small image of the same items.

HOW 2.0 INTEGRATE
TECHNOLOGY INTO
TEACHING?

For institutions: Technical Infrastructure.

For educators and learners: Learner and teacher familiarity with technology.

Bates, 1995

Please fill in the blanks

A picture is
worth.....
a thousand words.

but **WHY??**

Dual Coding Theory

- refers to dual channels for processing and storing visual and verbal information. Clark & Paivio, 1991
- Text is processed and encoded in verbal systems and pictures are processed both in the visual and verbal systems. **Pictures may be remembered better than text because they are coded twice.** Paivio, 1986
- **Meaningful learning** occurs when learners have to actively process information, that is, when they integrate both words and pictures into a meaningful construction. Wittrock, 1989

Digital Stories

100 tools to create digital stories!!

How 2.0 choose the right tool?

Digital Story Baking

DIGITAL STORYTELLING

Tool Selection

**Multimedia Design
Principles**

**Learner- centered
Approach**

Define Your Approach

Technology- Centered

OR

Learner- Centered Approach?

Technology- Centered Approach: The focus is on the capabilities of cutting edge technology.

Learner- Centered Approach: The focus is on the way that people learn and process information.

MULTIMEDIA DESIGN PRINCIPLES

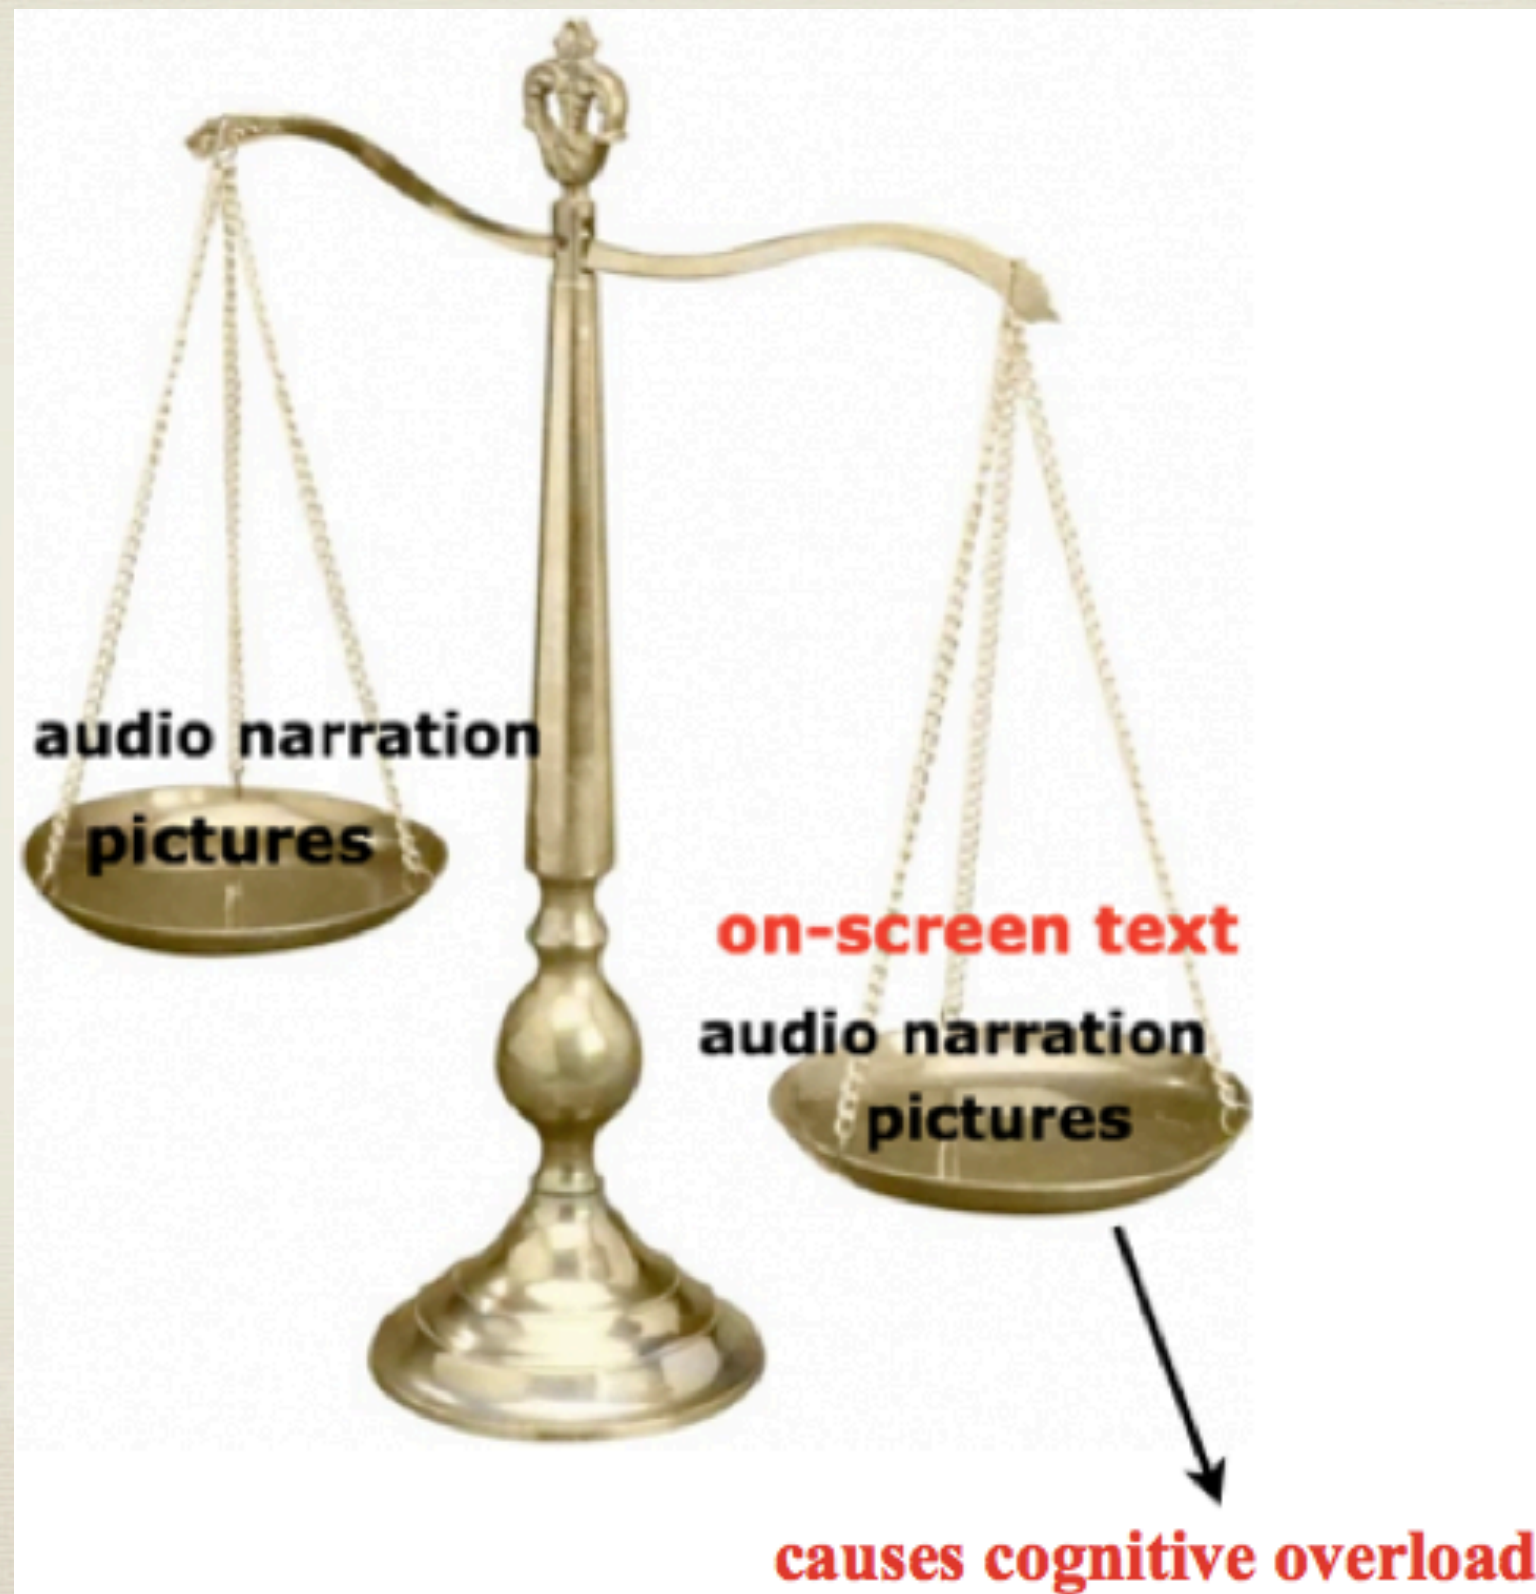

◆ **Multimedia principle:** People learn better from words and pictures than from words alone.

◆ **Coherence principle:** People learn better when extraneous **words**, **pictures**, and **sounds** are excluded rather than included.

◆ **Voice principle:** People learn better when words are spoken in a standard-accented human voice than in a machine voice or foreign-accented human voice.

◆ **The Redundancy Principle:** Since people have a limited working memory, presenting the same information in different formats impedes learning and causes cognitive overload. **(Teachers should avoid on-screen texts that merely repeat the audio narration).**

Modality Principle

The Cognitive Overload Theory

The cognitive overload theory is related to diminishing any unnecessary cognitive load in order to aid learning. The material which has no direct relation with the content will impede learning, so it is better to eliminate unnecessary images, sound or animation.

(Mayer, 2005)

Digital Stories: Little Bird Tales

◆ Teachers can capture the voice of their students, let them draw, import pictures or scan their drawings. It is also embeddable and so is good for blogs or wikis.

The best and original browser based rich media presentation and storytelling tool.

- allows users to add images, audio, and even videos.
- both students and teachers can create digital stories with Empressr, and they can embed them into their class blogs or wikis.

There is an app for that!

**Story
Kit**

*International
Children's Digital Library*

www.childrenslibrary.org

Some Questions

- 🌀 Is it free? (Do you need to pay to use the tool?)
- 🌀 Is it stable? (Is it a new tool, will it be around next year?)
- 🌀 Is it appropriate for the learners' needs?
- 🌀 Is it easy to use both for teacher and students?
- 🌀 Is it embeddable? (Can you embed it into your class blog or wiki)
- 🌀 Does it allow users to record audio? (Can you record your voice, or does it only provide 'text to speech'?)

How to Use These Digital Stories Effectively?

3D Effect

Teachers should basically follow the multimedia design principles, and be careful with the cognitive load theory. They should consider the **3D Effect** which summarizes the issues for effective digital storytelling.

Define your objectives

Do a search for the audio option

Do not use a heavy on-screen text with audio, or the same text with audio narration

Ensure that your content is interesting; do not try to make your material interesting with extraneous digital elements.

How many screens are too many? I just realised this morning that it's now become totally normal for me to work between four screens ... **but the iPhone is still the most fun :)**

Gavin Dudeney Hmm.... On a daily basis it's a Macbook Air screen plus connection to 28 inch LCD flat screen monitor, a Macbook Pro screen and an iPhone. Two iPads and an Android added as needed.... We should get out more :-)

Cameron Cam

Wowwwwwwwwwwwwwwwwwww you're the kind of multitasking...that's actually really cool you work between four screens (what I assume is) simultaneously.

May 9 at 3:41pm · Like

Mark Pegrum Yeah but even though there are 4 screens, as you can see from the pic I still need sticky notes ...

APPS

◆ **Goodreader:** This is a PDF reader and an annotater app, but it also enables users to organize, and access any file; in addition, users can sync their documents with Dropbox.

◆ **Posterous:** This is a great app to share ideas or maybe photos and videos. It can be used to write blog posts and lets users keep their posts private.

◆ **Textgrabber:** This app lets users extract texts from any printed sources, which is a perfect time saver for online learners. It also provides full-text translation.

◆ **Docas:** This is a pdf annotator and document reader. The key feature is that it allows users to annotate and create audio memos.

◆ **Diigo Offline Reader:** This lets users save websites and download files to browse offline.

This I Believe is an international organization engaging people in writing and sharing essays describing the core values that guide their daily lives.
